

The local government of Basque Country visits CIC bioGune during their 10 years anniversary celebration

El lehendakari asiste al acto de celebración del X aniversario de
CIC bioGUNE

The Cooperative Research Centre in Biosciences - CIC bioGUNE today celebrated the commemoration of its tenth anniversary which was attended by the President of Basque country Iñigo Urkullu and the Minister of Economic Development and Competitiveness Arantxa Tapia.

El **Centro de Investigación Cooperativa en Biociencias – CIC bioGUNE** ha celebrado hoy la conmemoración de su décimo aniversario en el que han estado presentes el lehendakari Iñigo Urkullu y la consejera de Desarrollo Económico y Competitividad Arantxa Tapia.

The Basque president reaffirmed that his government's priority remains economic recovery and help strengthen the industrial base.

Urkullu maintains that the strategy defined to exit the crisis is in the "right direction" and stressed the importance of innovation. The challenge, in his view, is that more companies join the innovation, R+D+i reach the industrial sector, small and medium enterprises.

This is the way, according to the Basque president to "look to the future with determination", introducing management improvements following criteria combining innovation and public-private investment.

El lehendakari ha **reafirmado** que la **prioridad** de su Gobierno sigue siendo la **reactivación económica** y contribuir a fortalecer el tejido industrial. Urkullu mantiene que la estrategia definida para salir de la crisis va en la "buena dirección" y ha destacado la importancia de la innovación. **El reto**, a su juicio, **es que más empresas se incorporen a la innovación, que la I+D+i llegue al tejido industrial, a las pequeñas y medianas empresas**. Este es el camino, según el lehendakari para "mirar al futuro de forma decidida", introduciendo mejoras en la gestión siguiendo criterios de innovación y conjugando la inversión público privada.

Following a tour of the facilities of CIC bioGUNE accompanied by José María Mato director and deputy general of Biscay, the Basque premier said that innovation "is closer to the new models of production, of market and of Europe" now.

Tras realizar una visita por las instalaciones de CIC bioGUNE acompañado por su director José María Mato y el diputado general de Bizkaia, el lehendakari ha afirmado que la innovación ahora "está más cerca de los nuevos modelos de producción, del mercado y de Europa".

Biosciences-Health

CIC bioGUNE falls within the scope of Advanced Manufacturing Bioscience / Health.

This center conducts cutting-edge research in fields of Structural, Molecular and Cellular Biology with special attention to the study of the molecular basis of the disease to develop new diagnostics and advanced therapies.

This contribution in the field of Bioscience / Health is "key" to one of the areas in which Euskadi has decided to specialize in that response, according to the Basque premier, large societal challenges such as health and aging population.

Biociencias-Salud

CIC bioGUNE corresponde al ámbito de la Fabricación Avanzada en Biociencias/Salud. Este centro lleva a cabo investigación de vanguardia en los campos de la Biología Estructural, Molecular y Celular con especial atención al estudio de las bases moleculares de la enfermedad para desarrollar nuevos métodos de diagnóstico y terapias avanzadas. **Esta aportación en el área de Biociencias/Salud es "clave" para uno de los ámbitos en los que Euskadi ha decidido especializarse porque da respuesta, según el lehendakari, a grandes retos de la sociedad como son la salud y el envejecimiento de la población.**

[Bioprocess Technology S.L.](#) is a bioprocess Solution Supplier Company.

We are experts in the bioprocess || We are a small structure || We have competitive prices || And we can achieve the full needs of small and big projects.

We can offer different kind of solutions:

Only engineering. (or consultancy) || Automation || SCADA system || manufacturing || commissioning || Different combinations of the above || Turnkey plant installations.

Our customers could be from:

- Bio-Pharmaceutical and Veterinary industry (mainly related with bioprocess, customers doing fermentation are core customers).
- Bio-R+D+I area (mainly related with bioprocess, customers doing fermentation are core customers).
- Bio-Agri-Food (are interesting but mainly those who need a turnkey plant installation and a high level of automation).
- Bio-Energy (are interesting but mainly those who need a turnkey plant installation and a high level of automation).

We can manufacture from 5 liters to 50.000 liters, depending on the final design and configuration.
